

Joomla Security Report

HackerTarget.com

HackerTarget.com is the world leader in online open source intelligence and security assessments. All scanning tools are on-line for easy and convenient access.

All HackerTarget.com Vulnerability Scan options are Free (limit of 4 / day)

Server / IP	Web Sites	Intelligence	CMS
Nmap Port Scan	WhatWeb Site Fingerprint	DomainProfiler	WordPress Scan
OpenVas Scan	SQL Injection Test	Fierce Domain Scan	Joomla Scan
SSL Check	Nikto Web Scan	Hosting Server Info	Drupal Scan
	BlindElephant Scan		

Professional Services

Security Scanning Membership	additional scanning (\$7 / month or \$49 / year)
Manual Security Assessment	professional assessment with full report (from \$400 USD)

 This report is autogenerated using various sources and scripts. No guarantee is made to the accuracy of the information found. See <http://hackertarget.com> for full Terms of Service.

Design and Layout is licensed under a [Creative Commons Attribution 3.0 Unported License](http://creativecommons.org/licenses/by/3.0/).

This report is based on an automated security scan using passive data collection after crawling the nominated site.

It was generated on **Mon Aug 8 19:48:06 2011**

[More Information](#)

Joomla Site Info

Site URI:	www.joomla.org/
Joomla Version:	unknown
	<p>✔ Advanced version fingerprinting can be done with blindelephant. Always ensure your Joomla software is up to date.</p>
Web Server:	Apache
X-Powered-By:	PHP/5.3.6
MetaGenerator:	Joomla! 1.5 - Open Source Content Management
Page Title:	Joomla!

Domain Reputation Check

The site www.joomla.org has been checked against web reputation services

Ref	Service	Site Check Result
	Google SafeBrowsing finds this site as safe	SAFE
	Norton SafeWeb determines this site to be Safe	SAFE
	MyWot has rated the sites trustworthiness as Excellent	94

Robots.txt found

The robots.txt is used to tell search engines to ignore parts of your site. It can also be used by attackers to find stuff you may not want to be public and other interesting directories.

raw file

```
User-agent: *  
Disallow: /administrator/  
Disallow: /cache/  
Disallow: /components/  
Disallow: /images/  
Disallow: /includes/  
Disallow: /installation/  
Disallow: /language/  
Disallow: /libraries/  
Disallow: /media/  
Disallow: /modules/  
Disallow: /plugins/  
Disallow: /templates/  
Disallow: /tmp/  
Disallow: /xmlrpc/
```

Site Links and Scripts

Links and scripts to external sites and unknown javascript **may indicate** the presence of malware or malicious scripting. Examine the results below, linking to sites of poor reputation or malware can result in [blacklisting by google](#) and other search engines.

External Site Links

Links to external sites, assessed for reputation

Appendix A : Additional Resources

Joomla is a stable and powerful content management system. A few simple steps can increase the security of the platform a great deal.

The Basics

- * **Back It Up** - Be ready to lose it all at anytime. If you have an up to date backup restoring is much easier
- * Keep Joomla System up to date
- * Keep all Plugins and Modules up to date
- * Beware of untrusted Themes and Modules
- * Rename admin account to a non-generic name
- * Use strong passwords (a dictionary word with a number after it is not a strong password!)
- * Keep your password safe! Do not re-use it on other sites.
- * Ensure you have up to date AV on your Windows Machine. Malware collects passwords.
- * The underlying server must be well managed and in a secure state
- * VPS or Dedicated server? Set up server monitoring (<http://www.ossec.net> is a good start)

Advanced Security Testing

This report has been generated using automated scripts and tools, while it provides a good overview of the general security of the site and any obvious problems, it is far from a comprehensive security assessment.

HackerTarget.com has a comprehensive security assessment offering that is in effect a simulated hacker attack against the target system. This assessment by its nature is much more aggressive than the automated review you are looking at now, and provides a full report with any security holes found along with recommendations for increasing the security of the system.

Alternatively there is a collection of security tools available for free and online for testing at HackerTarget.com.

Further Information

There are a thousand and one guides for drupal security tips. Some of the best information is from the source.

Security Checklist for Joomla.org
